Roll: 1718

Anup kumar kar

Sayeam hossain

submitted in partial fulfilment of the degree of

Bachelor of Science, with Honours

at the University of Asia Pacific, Dhaka,

Bangladesh.

10 October 2013

Declaration

I, hereby, declare that the work presented in this thesis is the outcome of the investigation performed by myself under the supervision of Dr. Saifuddin Md. Tareeq, Associate Professor, Department of Computer Science and Engineering, University of Dhaka. I also declare that no part of this thesis and thereof has been or is being submitted elsewhere for the award of any degree or diploma.

Approval

The Thesis Report "Amino Acid Interaction Network Prediction in Protein using Multi-objective Evolutionary Algorithm" submitted by Md. Shiplu Hawlader, Roll No: 1718, Session 2010-2011, to the Department of Computer Science & Engineering, University of Dhaka, has been accepted as satisfactory for the partial fulfilment of the requirements for the degree of Master of Science in Computer Science & Engineering and approved as to its style and contents.

Acknowledgements

First of all, thanks to Almighty Allah for giving me the potency and energy to complete this thesis successfully.

I want to express out gratefulness towards my thesis supervisor Dr. Saifuddin Md. Tareeq for his valuable advices and important suggestions. His regular and active supervision and erudite directions from the beginning to the end were the driving forces for the successful completion of the research work.

I would like to convey my gratitude to all of my teachers at the Department of Computer Science and Engineering, University of Dhaka. Discussions with many of them have helped me tremendously in improving the quality of the work. I am particularly thankful to Mr. Mahmudul Hasan and Ashis Kumer Biswas for their valuable suggestions. I also thank the department for providing me with resources which were necessary for the preparation of the thesis.

And last but not the least, I would like to express thanks to my parents and family members for their tremendous support and inspiration.

Abstract

Protein can be represented by amino acid interaction network. This is a graph whose vertices are the proteins amino acids and whose edges are the interactions between them. This interaction network is the first step of proteins three-dimensional structure prediction. The network can be predicted using multi-objective evolutionary algorithm and the interaction between amino acid can be confirmed using ant colony algorithm optimization which is a probabilistic optimization algorithm. In this thesis a new multi-objective evolutionary optimization algorithm has been proposed to predict protein secondary structure network using ant colony optimization approach to predict the amino acid interactions.
